Drawings

1. The drawings were received on August 14, 2001. These drawings are approved.

Claim Objections

- 2. Claims 2-3 are objected to because the variables "d" and/or "k" should be defined. Claim 3 is objected to because the acronym DRC should be defined. Appropriate correction is required.
- 3. Claim 2 is objected to because the value of g(d) should not be "k" but should be the equation of para. 1031 (see paras. 1032-1036).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1 and 4 are rejected under 35 U.S.C. 102(a) as being anticipated by EP 1 089 500 A2 ("Naim").

4. Regarding claims 1 and 4, Naim discloses a wireless communications system having at least one mobile station with pending data at a transmitter (Figure 1, item 12; para. 9; Figure 6). The system is used in a method comprising calculating a packet delay time for a mobile station (para. 13, dFr), comparing the packet delay time to a threshold (para. 13, "a") to determine a packet delay term (note: various values of P_transmit based on the value of dFr relative to "a") for use in a priority function for scheduling transmissions.

Application/Control Number: 09/929,179

Art Unit: 2666

Allowable Subject Matter

5. Claims 2-3 are objected to as being dependent upon a rejected base claim, but would be

allowable if rewritten in independent form including all of the limitations of the base claim and any

intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure. Kim et al. (US 2003/0012220; Figure 1 and para. 27) and Stolyar et al. (US 6,590,890;

Figure 2) each discloses using experienced delay to schedule a mobile transmission (Figure 1; para.

27). Grube et al. (US 5,583,869) discloses increasing the priority of a transmission due to delays

being above a certain threshold (col. 7, lines 31-41).
